WHERE YOUNG MINDS MEET NEW PLACES.
It is awful that rhinos are killed for things we ourselves produce every day: fingernails, toenails and hair! Some very upsetting pictures of rhinos with bloodied heads left in the veld after poachers have cut off their horn have been published in newspapers and on websites. These shocking pictures prompted people to take action, mainly by donating money to a well-known environmental organisation. We decided not to put these in the magazine but it’s important that you understand how serious the situation is. There is a lot you can do. One little boy raised money by selling rhino bands. You can also tell everybody that rhino horn has absolutely no special powers!

This is quite a serious way to start the year but I know how much animals and particularly rhinos mean to NG KIDS readers.

South Africa is an amazing place to live and now the world knows what we knew all along. Table Mountain in Cape Town has been voted one of the Seven Natural Wonders of the World. It’s fantastic news and is sure to bring many more visitors to our country.

Take a look at Inside Scoop this month. You’ll find lots of news as usual, but then you’ll see that you can vote for the stories you want to read more about in 2012. If you don’t want to SMS you can e-mail me at Fiona@ngkids.co.za or give me a call at 021-443-9841. It’s a new number as the team has moved into a new, very cool office which even has a pool table!

Dare to Explore!

**LETTER OF THE MONTH**

**DEAR FIONA**

**DURING THE OCTOBER HOLIDAYS I WENT TO THE ADDO ELEPHANT PARK WITH MY MUM, DAD, BROTHER AND LITTLE SISTER. THERE WERE MANY ELEPHANTS. ON THE LAST DAY WE SAW A HERD OF 31 ELEPHANTS! THERE ARE MANY OTHER ANIMALS AS WELL. WE SAW ONE OF THE RAREST: A LION. THERE ARE ONLY NINE OF THEM IN THE PARK. I TOOK A CUTE PICTURE OF TWO OSTRICHES STANDING BEHIND EACH OTHER, SO IT LOOKS LIKE ONE OSTRICH WITH TWO HEADS. BEHIND THEM AN ELEPHANT IS WALKING BY, HE SEEMS TO WANT TO BE PART OF IT AS WELL - HE’S RAISING HIS TRUNK. I LOVE CAMPING AND THE OUTDOORS AND I LOVE KG KIDS JUST AS MUCH!**

MARISKA DE WIT, 13

---

**SUBSCRIBER OF THE MONTH**

January’s subscriber of the month is Leon Visagie, 8, from Swartpan Farm, Makwassie, in the North West Province.

Leon won an awesome NIVEA® SUN hamper valued at R800 which includes a NIVEA® SUN Kids Swim & Play Lotion SPF 50+, Kids Trigger Spray SPF 50+, Kids Sun Lotion SPF 50+, Light Feeling Daily Face Sun Fluid SPF 50+, Invisible Protection Spray SPF 50, NIVEA® beach towel and kids reading book Paley, The Little Boy who wanted to be Friends with the Sun.

Keep your sensitive skin safe from the sun’s rays while you’re splashing around in the water and enjoying time outdoors. NIVEA® SUN’s new Kids Swim & Play Protection Lotion SPF 50+ for face and body is an easily absorbed, extra water-resistant sunscreen with a maximum SPF of 50+. The highly effective SPF contains a balanced UVA/UVB filter system and gets to work instantly after being applied, protecting your skin against sun damage.

Go to www.NIVEA.co.za for more information.

FOUR: Go to the checkout, enter your credit card details and download your e-zine!
How are you? I am fine, thank you. Really? No, not really. Why? I don’t know. They are all mean to me...

This sounds like a real conversation and in many ways it is, except that the second person is a robot. This robot, called Cleverbot, came quite close to passing something called the Turing Test. It’s named after one of the first computer boffs, Alan Turing, who came up first with the idea that you could program a robot to think for itself. In the Turing Test a human has a texted five-minute conversation with a robot called a chatbot. The test for the robot is to fool his human buddy into believing he’s human, too.

Every year designers take their chatbots to a competition where they try to fool the judges in a Turing Test. There’s a gold medal worth about R800 000 for the chatbox that wins, but organisers are pretty certain Cleverbot and his rivals like Jabberwacky won’t be claiming this prize any time soon. In 2012 the competition will be extra special as it celebrates the centenary of Alan Turing’s birth in 1912.

It’s your choice, NG KIDS! Do you want to learn more about chatbots? SMS* “NGK chatbot” followed by yes or no to 33970.

His parents were English, but J.R.R Tolkien was born in Bloemfontein on 3 January 1892. When he was three, the family moved back to England. Years later he visited Hogsback in the Eastern Cape and that, some people believe, was where he got the idea for his famous book The Lord of the Rings.
Some of Charles’ best-loved books are: A Tale of Two Cities, Oliver Twist and A Christmas Carol.

Mayan Myth

It’s a leap year again! What’s more, 2012 is the year the ancient calendar of the Maya people is supposed to end. Because of that some people believe a big change will come this year and it might be a bad one. NASA scientists were asked if there were any threats to our planet in 2012 and their answer was: nothing bad will happen. Earth has been getting along fine for more than 4 billion years and scientists worldwide know of no threat that is linked to the year 2012.

Now that’s a relief!

The Hobbit was published in 1937 and got great reviews. It is still said to be one of the best fantasy books ever and is recommended for kids from 11 to 14 years.

It’s your choice! Do you want to learn more about Mayans? SMS “NGK Mayans” followed by yes or no to 33970.

What the Dickens!

Charles Dickens lived in the 19th century. He was a famous author and his books are still widely read today – 200 years after he was born. They show what life was like in Victorian England, often for people who were badly off. Although Charles became wealthy and famous, things were not always so easy for him. Just after his 12th birthday his father was arrested for bad debt and the family except for Charles and his elder sister had to live in a debtor’s prison. Since he had no money and his dad couldn’t help him, Charles had to leave school and get a job. He ended up pasting labels on bottles in a rat-infested shoe polish factory for 12 hours a day.

It’s your choice! There will be an international campaign to mark the 200th anniversary of Charles’ birth. Do you want to learn more? SMS “NGK Dickens” followed by yes or no to 33970.

Some of Charles’ best-loved books are: A Tale of Two Cities, Oliver Twist and A Christmas Carol.

It’s your choice! Do you want to learn more about the Olympic Games? SMS “NGK Olympics” followed by yes or no to 33970.

The Olympic Games will take place in London in June and July.

Women’s boxing will be the new one among the 26 sports at this year’s Olympics.

London will be the first city to host the event three times.

We’ll see 10 500 Olympic athletes and 4 200 Paralympic athletes going for gold.

It’s your choice! Do you want to learn more about Mayans? SMS “NGK Mayans” followed by yes or no to 33970.

Read The Book!

The Hobbit was published in 1937 and got great reviews. It is still said to be one of the best fantasy books ever and is recommended for kids from 11 to 14 years.

| 1. | A New Year’s Eve celebration in Portugal included more than 65,000 fireworks. |
| 2. | A Ferris wheel in California runs on solar power. |
| 3. | The first lighthouse was three times taller than most of the ones today. |
| 4. | Lightning flashes more than 30 times each second all over the world. |
| 5. | Some jellyfish give off light to scare away predators. |
| 6. | Light from the sun reaches Earth in 8.32 minutes; the space shuttle would take about 220 days. |
| 7. | Antarctica can have 24 hours of daylight in summer. |
| 8. | Lemons can power lightbulbs. |
BABY CHEETAH GETS PET DOG

Florida, America

Whenever Kasi the cheetah wants Mtani the Labrador retriever’s attention, he chirps like a baby bird. Mtani responds by chasing Kasi’s tail. “They absolutely love spending time together,” says zoologist Mike Boos of Busch Gardens Tampa Bay, where the friends live.

The animals were introduced shortly after Kasi was abandoned by his mother. The baby cheetah was sad and alone, so caretakers found him a pal. They brought Mtani from an animal shelter and began supervising playdates for the pair. Now Kasi and Mtani spend most of their days cuddling, rolling around in the grass of the park’s cheetah habitat and playing tug-of-war with stuffed animal toys. They even share a large pillow when they snooze, with Kasi often falling asleep right on top of Mtani! If the cheetah is separated from his Lab friend, he chirps until the dog returns. Luckily the buddies have a lot of together time in their future: they’ve started travelling the country with their keepers, helping teach people about endangered animals such as cheetahs. “The two will be friends for life,” says Mike.

**CHEETAH**

- **HEIGHT**: 60 to 90 centimetres
- **WEIGHT**: 34 to 65 kilograms
- **RANGE**: Africa and part of the Middle East
- **CLAIM TO FAME**: These super-speedy big cats can go from 0 to 96 kilometres an hour in three seconds. Their 70-centimetre-long tails help them stay balanced during sprints.
- **FUN TO KNOW**: Cheetahs need to drink water only once every three to four days.

**LABRADOR RETRIEVER**

- **HEIGHT**: 50 to 60 centimetres
- **WEIGHT**: 24 to 36 kilograms
- **ORIGIN**: Newfoundland, Canada
- **CLAIM TO FAME**: With their webbed feet and strong tails, Labs are great swimmers. They were first bred to retrieve fishing nets from the water.
- **FUN TO KNOW**: Some Labradors work with rescue teams to save people trapped by avalanches, floods or other natural disasters.

ON SALE AT SELECTED SPAR STORES NATIONWIDE
CARROT SPACE RANGER
WHAT Veggie shaped like Buzz Lightyear
WHERE Oxfordshire, England
DETAILS This carrot is creating a buzz. An Englishman found the vegetable in his garden and noticed its resemblance to Buzz Lightyear from the Toy Story movies. The carrot probably got its odd shape by growing around pebbles in the ground. It won’t travel to infinity and beyond, but at least it escaped the kitchen cutting board.

BOAT UNZIPS WATER
WHAT Zip-shaped boat
WHERE Takamatsu, Japan
DETAILS Talk about a zippy ride! This zip-shaped motorboat was featured at an international art festival. It took inventor Yasuhiro Suzuki seven years to design and build the vessel, which can hold nine passengers. This boat is perfect for people who need to get somewhere on the fly.

HAVE FUN AT SPIER
Spier is the ultimate family experience in the Western Cape winelands. Play in the beautiful gardens and try fun activities such as visiting the cheetah and birds of prey projects.

THE Spier hotel has a supervised children’s clubhouse where kids can play games or watch a DVD while parents enjoy treatments at the spa. It is a fun adventure for the entire family.

Visit www.spiercoza or call 021-809-1100 for more details.

WIN WITH SPEEDO
Speedo SA has launched a new, colourful Learn to Swim range of swimwear and equipment for kids. The Sea Squad kit contains goggles, a swim cap and armbands.

You can win one of fifteen Learn to Swim kits valued at R330 each. E-mail your name, age and number to info@leapcommunications.co.za and include “Speedo NC Kids Giveaway” in the subject heading. Available at selected shops. Call 021-431-0346 for more information. Ask your parents to “Like” the Speedo SA Facebook page and look out for regular competitions.

NAARTJIE KIDS HAVE STYLE
The truly South African brand Naartjie Kids has been designing colourful, comfortable, long-lasting and stylish kids clothing for over 24 years. With ten brand-new collections per year for all kids under ten, Naartjie has everything for kids on the go!

Visit www.naartjie.co.za or call 021-448-3502 for more information.
For 22 years Eskom has been rewarding new ideas that can help to save electricity. By finding green, energy-efficient alternatives, we can save the planet one idea at a time! Meet the winners of the Young Designers category!

**Winner**

WHO: Greenwood Independent School in Plettenburg Bay  
IDEA: A green solution to a big problem in low-cost housing in South Africa

Greenwood Independent School in Plettenburg Bay was crowned the winner in the Young Designers category of the Eskom 2011 eta Awards. The team looked at the relationship between climate, building design and energy usage in RDP house design. Through a series of experiments back at school, they found that RDP houses had no insulation and precious heat would escape through the roofs and windows. The team also found that north-facing houses had a temperature rise of six degrees internally, compared to west-facing houses which had no temperature rise at all! Positioning and building the houses so they face north and insulating the roof would save a lot of energy! The team met the local mayor who said their findings “were a real eye-opener” to him and their research would be taken into account when new RDP houses are built. These young designers made a huge impact on their local environment and on the lives of township residents in the future.

**Runner-up**

WHO: Keegan Cordeiro, 16, White River  
IDEA: A solar-powered system to charge cell phones and other small appliances

Keegan designed and built a solar-powered system that can charge cell phones and run various small appliances that require 220 volts of alternating current and use a two-point plug. The solar panel charges a battery which is 12 volts DC (direct current) and the inverter charges the DC current to 220 volts AC (alternative current) which is needed by many appliances.

**Runner-up**

WHO: Laura Andreas, 16, Cape Town  
IDEA: A water purifier that generates electricity at the same time

Laura has built a solar furnace that takes the salt out of salt water and also generates electricity. She chose this project as she wanted to see if it is possible to desalinate water and generate electricity using only solar energy. Her solar-powered desalinating device heats salt water to boiling point, with the steam driving a turbine which generates electricity. By condensing the steam, it produces fresh, drinkable water!

**Special Award Winners**

WHO: The grade 4 class at Shri Vishnu Primary School in Pietermaritzburg  
DESIGN: The Solar Cooking Project

The class won a special award for developing a way to reduce energy use, while recycling everyday items found around the home. Using an old satellite dish and compact discs the class made a system that boils two litres of water in 25 minutes. Now you can prepare a meal while you are recycling!

Visit www.eta-awards.co.za to find out more about the eta Awards.
Rhinos are the powerhouses of the animal kingdom, but there are many dangers in the tall grass of the savanna. NG KIDS uncovers the secrets of the African rhinos.

BLACK AND WHITE
In Africa there are two species of rhinoceros, the black and the white rhino. South Africa has about 20,000 white and 1,700 black rhino. You can tell them apart just by looking at their lips. White rhinos are grazers and have square lips for munching grass like cows. Black rhinos have a more hooked upper lip for pulling leaves off branches and are browsers like giraffes. While a rhino eats, small brown birds with red beaks perch on his back. These are oxpeckers. In Swahili they are known as “askari wa kifaru” which means “the rhino’s guard”. One theory is that the oxpecker grabs a meal by eating ticks from the rhino’s skin and may even warn of approaching danger as the rhino munches away. But the rhino needs more than this little bird’s help.
THREAT TO RHINOS
Southern white rhinoceros were once found in large numbers across southern Africa. Their horns and thick skin protected them against predators like lion and hyena. In the 19th century they were almost wiped out by hunters. Their survival is a conservation success story as there were only 100 white rhinos left in the wild in 1895.

In the past few years poaching has become a big problem again. “One of the worst years for conservation in South Africa was 2010,” says Dr David Mabunda, the Chief Executive of South African National Parks. A total of 333 rhinos were poached, most of them from the Kruger National Park. Last year was no better.

Most of the rhinos killed were white rhinos. People poach the rhino for its horns because of an Asian myth that the horn has special medicinal powers.
**WHITE RHINO**
The white rhino is the world’s largest land animal after the elephant and is one of the Big Five. The males can weigh over two tons. Rhinos are social animals and hang out in crashes or herds of 10 to 15 animals, often with a dominant male who is territorial. When he greets another male, they will lock horns, slowly lower their heads to the ground and then lock horns again. They communicate by making sounds such as squeaks, squeals and low grumbles. When they are in a good mood rhinos rub their sides against one another’s. Rhino mums are pregnant for a year, so it takes a long time for their numbers to rise. At birth the calf weighs between 45 and 55 kilograms.

**BLACK RHINO**
The black rhino is as grey as the white rhino, but it is smaller and has a hooked mouth. It is not nearly as social as its cousin and prefers to roam alone, although a mother and her calf will spend short periods of time together. The black rhino is known to be very fierce and quickly charges when under threat.

**DID YOU KNOW?**
There are five species of rhino. Two are found in Africa and the other three in Asia. The African species and the Sumatran rhino have two horns. The two other Asian rhinos only have one horn.
NG KIDS READER ASKS THE QUESTIONS!

Stuart Davis (13) from Glenashley Preparatory School in Durban interviewed Braam Malherbe about rhinos. Braam is an honorary ranger for South African National Parks and has been involved in training rangers for operations against poaching.

Stuart: Why do rhinos mean so much to you?
Braam: Not only are they one of Africa’s Big Five, they represent something ancient that has been here for a long, long time. All humans originally came from Africa, so we are all connected to Africa no matter where we live. Rhino poaching is a symbol of man’s greed and ignorance. There is no medicinal value in the horn. It’s made up of keratin just like a human fingernail. So you might as well chew your fingernails instead of killing a rhino for its horn!

Stuart: When did you fall in love with rhinos?
Braam: Seeing them for the first time as a young boy. It was early morning and the smells of the bush were all around. We were walking and all of a sudden a rhino cow and her calf stood up from their sleep in the long grass. The air was crisp and I will never forget the mist coming from their nostrils as they sniffed the air for any threat. We were downwind, so they could not smell us and their eyesight is poor. It was a special and humbling experience!

Stuart: Do you believe we are doing our best to prevent rhino poaching?
Braam: We are trying hard but we can always do better. Life is about improvement. Everyone should be involved, from children to adults to governments. Laws must be changed and enforced, both in South Africa and in the Eastern countries. There is not just one solution but many and we need to explore and use all options together.

Stuart: What fascinates you about rhinos?
Braam: They are strong and powerful, yet gentle, innocent creatures that mean no harm to anything unless hurt or threatened—a little like humans, but without the greed.

Stuart: Who do you respect the most in the anti-rhino poaching world?
Braam: Many people are doing great work, but I guess it’s the “foot soldiers”. These are the guys who walk long-distance patrols in dangerous areas, tracking the poachers. They are not well paid and yet they put their lives on the line to protect our precious wildlife.

Stuart: What can kids do to help in the effort against rhino poaching?
Braam: Be a voice, be heard. Make posters at school and tell people how you feel. Raise funds for a cause but make sure the money goes to a credible organisation like the Endangered Wildlife Trust (EWT) or WWF.
Four tiny orphans find a new mum.

BY SCOTT ELDER

Hungry and cold, a baby red fox cautiously emerges from its hiding place. The little fox, called a kit, follows the scent of its missing mother onto a wooden deck behind a house, but the scent trail mysteriously ends there. Unsure what to do next, the kit stays there, breathing in the comforting reminder of its parent.

Sandra Schulte passes a window in her home in Regina, Canada and catches a glimpse of something on her neighbour’s deck. “I saw something greyish moving around,” she says. The critter is so small that Sandra thinks it’s a little gopher. She steps outside to get a closer look. It’s a tiny, shivering fox.

Sandra realises right away why the kit is drawn to that spot. One week before, an adult female fox had died right where the kit is sniffing. Animal control officer Ryan Johnston, who’d been called in to remove the dead fox said she might have kits hidden somewhere. Neighbours didn’t see or hear baby foxes—until now.

Thrilled that the kit has survived, Sandra calls Ryan with the news. But before Ryan arrives, the kit retreats back to its hiding place. He shines his torch under the low deck and spots four fuzzy kits huddled together against the house. He catches them all and leaves them in a cardboard box with Sandra and her husband, who agreed to keep the kits in their warm garage overnight until other arrangements could be made.

WHAT NEXT?
The foxes had spent a week without food in nearly freezing temperatures. The Schultes contact Cheryl Winkler, founder of Moose Mountain Recoup and Release Wildlife Rehabilitation, to find out what they should do next. Cheryl advises the Schultes to cover the kits with warm towels and arrange to take the orphans. “They didn’t look that bad, but looks are deceiving,” Cheryl says. “They were all fur and bones.” She estimates that the two males and two females are about five weeks old. The smallest one weighs only 400 grams, less than half what a fox its age should weigh. All four kits are dangerously undernourished and dehydrated. “I was worried about them,” Cheryl says. She rushes the little foxes to her facility and gives them fluids every two hours for 24 hours straight. Happily the kits’ health begins to improve.

FOSTER FAMILY
Once the kits regain a healthy body temperature, Cheryl begins feeding them a nutritious formula made specially for young foxes. Soon she begins to add solid food to their diet, including small mice and soft cat food. In just one week at the rehabilitation centre, the orphaned foxes double in weight.

Now that their condition is stable, Winkler introduces the kits to Rose, an adult fox who lives at the facility permanently. Because of poor vision, Rose can’t survive in the wild, but Cheryl hopes she can help raise the kits “the fox way.” After some sniffing through the fence, Rose gradually spends more time with the orphans and a bond grows between the kits and their foster mum.

Soon Rose stands guard over their enclosure, calls the kits to meals of mice and berries and grumbles warnings to her foster family about unfamiliar humans. “It’s absolutely incredible the way her motherly instincts came out,” Cheryl says.

The healthy fear of people and other survival skills that Rose teaches the kits are essential when Cheryl releases the foxes into the wild. She simply opens their enclosure and allows the matured kits to explore the neighbouring Moose Mountain Provincial Park.

Cheryl will put out food until the foxes master hunting and foraging. And the four siblings will always be welcome to visit Rose, their affectionate foster mother.

LITTLE FOXES

18 JANUARY 2012
**MYTH** ELEPHANTS ARE AFRAID OF MICE.

**HOW IT MAY HAVE STARTED** People used to think that mice liked to crawl into an elephant’s trunk. “They thought that would cause great damage and terrible sneezing,” says Jack Hanna of the Columbus Zoo in Ohio, America. So it makes sense that elephants would be afraid of the rodents.

**WHY IT’S NOT TRUE** Although elephants do get anxious when they hear pitter-pattering sounds they can’t identify, an elephant’s eyesight is so poor that it could barely even see a mouse. And if an elephant isn’t afraid to live among predators such as tigers, rhinos and crocodiles, a mouse would be the least of its worries.

**MYTH** BULLS CHARGE WHEN THEY SEE RED.

**HOW IT MAY HAVE STARTED** Traditionally a red cape is part of a bullfighter’s colourful costume. When the bullfighter flashes the cape at the bull, the bull charges.

**WHY IT’S NOT TRUE** Movement actually makes a bull charge. “I’ve seen bulls chase everything from red to blue to checks,” says Temple Grandin of Colorado State University in America. “It’s the motion of the bullfighter’s cape, not the colour.”

**MYTH** A CAMEL’S HUMP HOLDS WATER

**HOW IT MAY HAVE STARTED** Thousands of years ago, desert nomads probably noticed how far a camel could travel without water. They might have assumed its hump stored extra H₂O.

**WHY IT’S NOT TRUE** Few animals can last a week without water, but a camel can survive up to two weeks. One reason is that a camel can get extra moisture from fat — and that’s what is stored in its hump. “The hump is composed of up to 36 kilograms of fat for nourishment,” Jack says.
Some people mistakenly think adult opossums hang by their tails, or that porcupines shoot their quills. What other wrong ideas are out there? NG KIDS checked out some common animal myths.

**MYTH PIGS ARE FILTHY.**

Yes, pigs wallow in the mud. Things can get messy.

**HOW IT MAY HAVE STARTED**

Being muddy doesn’t mean a pig is not clean, says Harry Snelson of the American Association of Swine Veterinarians. Long ago, pigs learned to use mud to meet their needs: it’s a natural sunscreen, an insect repellent and a way to keep cool. Pigs are so clean that they refuse to “go” where they sleep.

**WHY IT’S NOT TRUE**

Because dry rice expands when cooked, people probably thought a bird’s stomach would expand with it. A more likely reason for this myth was to stop wedding guests from throwing rice, which makes the ground slippery for humans.

**MYTH IF A BIRD EATS RICE, ITS STOMACH WILL EXPLODE.**

Because dry rice expands when cooked, people probably thought a bird’s stomach would expand with it. A more likely reason for this myth was to stop wedding guests from throwing rice, which makes the ground slippery for humans.

**WHY IT’S NOT TRUE**

"A bird’s stomach doesn’t reach the boiling point necessary for rice to expand,” says Erin Estell of the National Aviary in America. So the rice would never get to a harmful size. And if this myth were true, there would be a lot fewer birds in the world. Many migrate through rice fields and feed on the rice.

While an adult human’s brain weighs about two kilograms, an average goldfish’s brain weighs only a tiny fraction of that. So how could there be any room for memory in there?

**MYTH GOLDFISH HAVE ONLY A THREE-SECOND MEMORY.**

Research has shown that goldfish are quite smart. Phil Gee of the University of Plymouth in England trained goldfish to push a lever that dropped food into their tank. “They remembered the time of day that the lever worked and waited until feeding time to press it,” Phil says. One scientist even trained goldfish to tell the difference between classical and blues music!
by Molly Lyons

Beep! The man stops suddenly as his metal detector makes a sound. Something is buried under the English field he’s been exploring. Is it a worthless piece of metal—or something far more valuable?

It’s valuable. The man’s discovery turns out to be more than 3,500 pieces of gold and silver treasure buried by ancient warriors at least 1,300 years ago. Archaeologists uncovered sword handles, helmet pieces and shield decorations. Some were studded with jewels or engraved with animals.

The treasure is worth about R40 million. But archaeologists are more excited about what the discovery could tell us about these ancient warriors.

Mysterious People
The treasure was buried by people called the Anglo-Saxons, who settled in England after arriving from Germany starting around AD 410. The Anglo-Saxons were constantly at war—both with each other and with neighbouring lands. They ruled until about 1066, when French invaders called Normans overthrew them.

In the seventh century the most powerful Anglo-Saxon ruler was King Penda of Mercia. Archaeologists like Kevin Leahy, who studied the buried gold and silver, think the treasure may have belonged...
Scientists have tried to identify the real-life uses of the mysterious treasure. Here's how they match up in this artist's rendering of an Anglo-Saxon warrior.

SECRETS OF THE TREASURE
Anglo-Saxons were considered fierce warriors and they cared about their weapons. But the quality of the metalwork shows they were also artists. Craftsmen created tiny, detailed engravings without magnifying lenses. Some of the materials came from faraway lands. Garnets most likely came from India and gold may have come from what is now Turkey.

The treasure may also shed new light on where Anglo-Saxons lived. The loot was found in western England, rather than the south or east, where archaeologists believed early Anglo-Saxons settled. That may mean the people had travelled further than once thought.

Still archaeologists have more questions than answers: why were only parts of weapons found? Why weren't there any items belonging to women? Was the treasure buried for safekeeping or to mark a victory? Why didn't they come back for it?

The answers to these mysteries may come with further study, but more than anything, this discovery has brought the people of the Anglo-Saxon era to life. "It's like travelling through time to realise that someone had touched these things centuries before," Kevin says. "One thing is certain: these people wanted to be remembered." Now it's up to archaeologists to figure out their secrets.

PIECES FROM THE PAST

CHEEK PIECE
This helmet fragment protected a warrior during battle.

POMMEL
This knob formed the very top of a hilt, or handle, of a knife.

HILT FITTING
Decorated with red gemstones called garnets, this piece was the bottom part of the handle.

COLLAR, RING AND CAP
Made of gold, these were attached to the knife's pommel.

Scientists used modern technology to examine the ancient treasure.

COMPUTERS The gold and silver pieces were scanned into a computer so scientists could analyse them.

X-RAY FLUORESCENCE X-rays produced energy waves that scientists could measure to instantly know what the treasure was made of.

ELECTRON MICROSCOPES These zoom in on the finest details. When the treasure was being cleaned, the microscopes were connected to video cameras so scientists could watch the etchings emerge.

THE SUBURBS CAN'T COMPETE

Explore the wild world of National Geographic Kids magazine.
Check out these outrageous facts.

A tightrope walker is called a funambulist.

A flamingo can eat only when its head is upside down.

The Dead Sea is seven times saltier than any ocean.

Laws in England were written in French for more than 400 years.

Our universe has no centre.

Yawns are contagious for chimpanzees, just as they are for humans.

You can buy an inflatable TV screen.

Some mushrooms glow in the dark.

The temperature on the moon can be hotter than boiling water.
Silent and sleek, a snow leopard climbs to a rocky ledge high in the mountains of Mongolia. A springtime breeze carries a whiff of prey to her nose. She spots an ibex—a wild goat—on the steep, rugged slope below. There are few places to hide, but snow leopards are masters of stealth. The big cat stalks her prey, moving like a ghostly shadow against the mountainside.

Suddenly the ibex is startled and sprints across the cliffs as the snow leopard springs downhill in pursuit. The air is thin at an altitude of nearly 3,000 metres, but the cat's large lungs and wide nose help her breathe. She holds out her long, wide tail for balance as her big, padded paws grip the ground. A minute later, she has secured her meal and looks for a place to dine.

These big cats are nearly impossible to see. Their spotted coats act as cloaks of invisibility by blending into the rocky background. But hunting scenes like these have been captured on video by researchers who spend countless hours searching the mountains of Central Asia for snow leopards.
**NAME GAME**
Despite their name, snow leopards are not white. Their spotted grey or beige fur actually stands out against a snowy background — but blends in with rocks.

**PASSPORTS, PLEASE**
Snow leopards live in twelve Central Asian countries: Afghanistan, Bhutan, China, India, Kazakhstan, Kyrgyzstan, Mongolia, Nepal, Pakistan, Russia, Tajikistan, and Uzbekistan. Their range spans over five million square kilometres, which is about half the size of Greenland.

**QUIET KITTIES**
Even though they are big cats, snow leopards have small voices. They mew, growl and puff ... but they can’t roar.

Despite their name, snow leopards are not white. Their spotted grey or beige fur actually stands out against a snowy background — but blends in with rocks. Snow leopards live in twelve Central Asian countries: Afghanistan, Bhutan, China, India, Kazakhstan, Kyrgyzstan, Mongolia, Nepal, Pakistan, Russia, Tajikistan, and Uzbekistan. Their range spans over five million square kilometres, which is about half the size of Greenland. Even though they are big cats, snow leopards have small voices. They mew, growl and puff ... but they can’t roar.
EVEN THOUGH SNOW LEOPARDS LIVE IN SOME OF THE MOST TERRAIN ON EARTH, PEOPLE POSE THE BIGGEST THREAT TO

Researchers think only 3,500 to 7,000 snow leopards exist in the wild, but no one knows for sure. Snow leopard experts need to gather more information about the elusive cats' lives to help protect them. Researchers use high-tech tools to spy on the secretive snow leopards. They gently trap the wild cats to examine them and put on satellite radio collars to track where the cats roam. Motion-activated digital cameras capture images of snow leopards, exposing many new details about how many there are, how they live and what threatens their survival.

**The Real Threat**

Even though snow leopards live in some of the most rugged mountain terrain on Earth, people pose the biggest threat to their survival. Poachers can sell a snow leopard's hide and bones for thousands of rands. Herdsmen often kill any snow leopard that attacks their livestock. Hunters target ibex, wild sheep and other animals for food and trophies—removing important snow leopard prey.

Researchers like Tom McCarthy, a snow leopard expert with the conservation group Panthera, are trying to stop these activities to save the snow leopards that remain in the wild. The more Tom can learn about snow leopards, the better he can protect them.

But camouflaged snow leopards are hard to follow in the steep mountains of Central Asia. Tom is tracking eight cats that his team has fitted with radio collars. Like having eyes in the sky, Tom uses a satellite to gather details from a cat's collar so he can keep up with its movements. “The habitat is rugged,” he says. “With better equipment, we can follow the cats.”

At a high altitude study site, Tom follows the signal from a radio collar that hasn't moved in a couple of days. He suspects it fell off a female snow leopard. Suddenly the snow leopard explodes out from behind a bush about six metres away. The big cat lands at Tom’s feet and a split second later her powerful hind legs send her bounding to the ridge above him. In a flash, she is gone, still wearing the collar. “This must be what an ibex feels like,” thinks Tom, his heart pounding. Weighing just under a hundred kilograms, an adult snow leopard could easily bring down a person.

“If that had been a tiger or lion or any other big cat, I wouldn’t be here to talk about it,” Tom says. The snow leopard's docile nature is a plus for him. Local herdsmen and hunters also know that snow leopards don't attack humans, which makes them easy to kill. But high-tech tracking devices mean he can learn new
things about how and where they live, which helps conservation efforts.

**Social Networking**

On a cool summer night, a snow leopard walks into a popular scraping site. This lone, mature male curiously sniffs an over-hanging boulder for a strong scent sprayed by other cats. He rubs his cheek on the boulder, scrapes the ground with his hind paws and then urinates on it.

Scraping sites are the snow leopard version of Facebook. “When users go on Facebook, they tell others what they’re doing. Snow leopards use ‘Scrapebook,’” says Koustubh Sharma, a researcher with Snow Leopard Trust. “They scrape and urinate on it and that’s how they communicate. It may reveal whether a snow leopard is male or female, has cubs, or is looking for a mate.” The next snow leopard that visits the site will get to know a lot about others in the area.

Koustubh keeps scraping sites under surveillance using motion-activated cameras. Like a snow leopard reality TV show, cameras expose everything that happens. “We see cubs playing in front of the camera while their mom spends time around,” he says. The camera images help researchers count the number of snow leopards in an area and reveal whether prey animals, livestock or poachers are nearby. In many places winter weather forces snow leopards down to lower land to follow prey that has gone to warmer elevations in search of food. There the cats compete with people over the available food supply. With prey animals becoming scarce, one young male snow leopard starts across an open desert to find new hunting grounds on a mountain range 80 kilometres away. As he heads across the rocky landscape, his camouflaged coat makes him disappear, but his tracking collar tells scientists where he goes. Technology such as this is essential to help researchers like Tom and Koustubh protect this snow leopard, other cats like him and their habitat.
When a young dolphin is caught in a trap, her tail gets badly damaged. Luckily she is found by a team of people who do everything they can to save this brave little dolphin. It will take the expertise of a dedicated marine biologist, a brilliant prosthetics doctor and the friendship of a young boy to bring about a miracle.

NG KIDS goes behind the scenes of the movie Dolphin Tale.

TRUE TAIL

The movie tells the true story of Winter, a two-month old dolphin who got caught in a crab trap. Only a baby and weighing 30 kilograms, the dolphin struggled to breathe. She was transported to the Clearwater Marine Hospital where her fight for survival began. Her tail was severely damaged and had to be amputated. She wasn’t expected to live.

Winter the dolphin stars as herself in the movie and soon charmed everyone working on the set. Her favourite crew member was the underwater camera man. She liked to sneak behind the camera and nuzzle up to him.

COOL EXPERT DOLPHIN FACTS

The largest dolphin is the orca, or “killer whale.”

Dolphins use a technique called echolocation, which works like radar, to find food and navigate.

The bottlenose dolphin’s brain weighs 1.5 to 1.6 kilograms.
DOCTOR DOOLITTLE
In the movie Dr Ken McCarthy is giving the seeming impossible task to create a prosthetic tail for Winter. In the true story Dr Kevin Carroll, a specialist in designing prosthetics, volunteered to help Winter.
Originally the doctors thought Winter would have to learn to swim without a tail. This would have switched her swimming style from “up and down” to “side to side” and that could have damaged her spine. It took him more than a year to build and perfect the prosthetic tail.

BIONIC BEASTS
Winter was not the first animal to receive a prosthetic limb. When Beauty the bald eagle lost 90 percent of her beak after being shot by a poacher, Nate Calvin, co-founder of Kinetic Engineering Group, offered to build Beauty a beak. Even though the final version is still in progress, she uses her temporary beak made of nylon polymer to eat and drink.
Fuji the dolphin got a rare disease which ate away her tail fin. Without it, a dolphin can’t swim or dive. An artificial rubber fin was created for Fuji and soon she was swimming and jumping again.

HEROES OF THE SEA
In the movie a young boy, Sawyer, discovers an injured Winter in the trap and frees her. They form an instant connection. Humans and dolphins have a long history of heroic tales. In this story, humans save the dolphin, but in old sea stories there are claims of dolphins helping drowning sailors, rescuing people from sharks and making themselves useful as guides through treacherous waters.
But does this really happen? Surprisingly often! In 2004, a group of swimmers were confronted by a great white shark, off the coast of New Zealand. A pod of dolphins “herded” them together, circling them until the great white fled. There are also stories of dolphins saving other animals. In 1983 at Tokerau Beach in New Zealand a pod of pilot whales ran aground during ebb-tide. The people who lived there came out and did their best to keep the whales alive, sponging their skin and calming them, until the tide came back in. But even then the whales were having trouble. Dolphins came to the rescue. Somehow, a pod of dolphins figured out what was happening. They swam into the shallows — putting themselves at risk — and herded the pilot whales out to sea, saving 76 whales.

ANIMAL ANTICS
Winter could already catapult herself into the air and land on a rubber raft in the water. So director Charles Martin Smith put that trick in the movie! Dolphins are famous for their playfulness and brains. “Just like all social animals, dolphins play, hunt and feed together. They live in groups and play is a way to bond. Dolphins are curious creatures and learn from their friends and family. Play is often a way for them to learn these lessons,” says Gabrielle Harris, the mammals and birds curator at uShaka Marine World.
Dolphins also have large brains for their bodies — in fact, a bottlenose dolphin is second only to humans in the ratio of brain size to body size.

Dolphins have been seen hunting and working together to herd fish into tight balls.
The smallest is the tucuxi dolphin, which grows to about 1.2 metres.
Dolphins are warm-blooded. Their bodies stay at about the same temperature all the time.
Let your imagination run wild and create a wonderful artwork. Pick up a paintbrush, make a collage or draw something. Get arty and enter the NG KIDS Young Artists competition.

**WAYS TO ENTER**

- Turn to page 38 for the entry form.
- E-mail your entries to yac@ngkids.co.za. Remember to write NG KIDS YAC in the subject line and include your age group with your artwork's title and category.
- Post your entry to NG KIDS Young Artists Competition, PO Box 2271, Cape Town 8001.
- Visit the NG KIDS SA fan page on Facebook and click on the YAC tab.
- Deliver your entry to ABSA Building, Media24 Lifestyle Division, Ground Floor Reception, 4 Adderley Street, Cape Town.

**AGE GROUPS**

- 5 to 7
- 8 to 11
- 12 to 14

**WHAT TO DO**

- Paint a picture, create a sculpture or make a collage. You can be inspired by anything you like and it can be any size!
- Decide in which categories you want to take part. You can enter one artwork in each category.
- Entries open on 14 December 2011 and close on 21 February 2012.

**CATEGORIES**

- **3-D SCULPTURE**
  - Get creative with clay, papier-mâché, wood or a mix of recycled materials.

- **COLLAGE OR MIXED MEDIA**
  - Mix and paste any material to create a mashup masterpiece.
WIN AWESOME PRIZES

ART HAMPER

Nine winners – three in each category – will get an art bag filled with art supplies including Glitter Glue, Crazy Clay and more from Bostik! They will also win a year’s subscription to NG KIDS, a Wii console with a uDraw Game Tablet, uDraw Studio game software and a copy of Pictionary, valued at R2 600 each, courtesy of Ster Kinekor Entertainment. The school that sends in the most number of entries will get the same prize package, art supplies worth R5 000 and three art bags from Bostik!

GRAND PRIZE

The uDraw GameTablet™ for the Wii™ is a first of its kind. It’s a revolutionary game system that provides a unique and enjoyable way for kids and families to play with Wii™. Its innovative features allow kids to express themselves and bring their imaginations to life. The uDraw GameTablet creates an all-new category of play through an easy-to-use system of controls. Also for PS3 and Xbox. Visit www.worldofudraw.com for more information.

TURN TO PAGE 38 FOR TERMS AND CONDITIONS AND ENTRY FORM

THE PANEL WILL JUDGE THE ENTRIES BASED ON CREATIVITY (50 PERCENT) AND SKILL (50 PERCENT). THE DECISION OF THE JUDGES IS FINAL. ACTUAL ARTWORK WILL BE REQUIRED FOR JUDGING.

DRAWING AND PAINTING

DRAW WITH PENCILS, CRAYONS OR PAINT. CREATE A STILL LIFE OR A SCENE FROM YOUR IMAGINATION.

COMPETITION CLOSES

21 FEBRUARY 2012

NG KIDS YOUNG ARTISTS
COMPUTITION ENTRY FORM

FULL NAME: ______________________________________

AGE: _______ BIRTH DATE: ___________

PHYSICAL ADDRESS: ______________________________________

SCHOOL: ______________________________________

ARTWORK TITLE(S): ______________________________________

CATEGORIES: (you can enter up to three artworks)

- DRAWING AND PAINTING
- SCULPTURE
- COLLAGE AND MIXED MEDIA

TELEPHONE NUMBERS: ___________________________ HOME ___________________________ GUARDIAN’S CELL ___________________________

NAME OF GUARDIAN: ______________________________________

CLOSING DATE: 21 FEBRUARY 2012

TERMS AND CONDITIONS:

1. The competition opens on 14 December 2011 and closes on 21 February 2012. 2. It is open to all readers who are between 5 and 14 years of age on 1 February 2012. 3. All art must be the entrant's own work. Only one artwork for each category per entrant will be accepted. 4. Poster art exhibited at the competition and their immediate families are not eligible to enter. 5. Digital entries will be submitted for judging purposes. 6. Employees of Media24, sponsors and their agents or any company associated with the competition and their immediate families are not eligible to enter. 7. Employees and employees of their families are not eligible to enter. 8. All decisions are final. 9. Employees and their families are not eligible to enter. 10. Prizes cannot be exchanged and no cash alternative will be offered. 11. Allow two months from announcement of the winners for delivery of prizes.

12. A panel will judge the entry based on creativity (50 percent) and skill (50 percent). The decision of the judges is final and no correspondence will be entered into. 13. Employees of Media24, sponsors and their agents or any company associated with the competition and their immediate families are not eligible to enter. 14. Digital entries will be accepted but remember that actual finished artwork is far more impactful when it comes to judging. Should your artwork be selected for judging purposes, it will be compulsory for the entrant to supply the original artwork to NG KIDS. 15. Employees and their families are not eligible to enter. 16. Employees and employees of their families are not eligible to enter. 17. Employees and employees of their families are not eligible to enter. 18. Employees and employees of their families are not eligible to enter. 19. Employees and employees of their families are not eligible to enter. 20. NG Kids Media24 or the National Geographic Society shall not assume liability for any ambiguous error, oversight or omission whether negligent or otherwise which may be committed by any employee of NG Kids, their agents or associates in respect of their competition.

Entry signifies acceptance of the rules. Refer to www.ngkids.co.za for full terms and conditions.

Dream Big With Bostik!

Give your New Year’s resolutions a boost by making a dream board. Then put this creative collage in your room for inspiration.

**My Dreams**

1. Qualify for the athletics team
2. Save R500 every month
3. Learn to fish for family holidays
4. Take spot for a walk every day
5. 100% average for Science
6. Love your world
7. Take more pics of my friends
8. Recycle to save the planet

**WHAT YOU DO**

1. Think about the goals you have for the year ahead. You can brainstorm ideas with parents or friends if you like.
2. Write them down on a piece of paper and circle the ones you want to concentrate on.
3. Decide how you want to illustrate each one and collect your materials.
4. Arrange your dream board ideas on a large piece of craft paper and play with the design before you glue them for good!

**TOOL BOX**

For sticking power that will last all year, make sure you use the right glue for the job!

- **Bostik Glue Stick** is great for sticking paper. It is quick-acting and does not wrinkle paper.
- **Bostik Art & Craft White Glue** is perfect for all those tricky, sticky jobs like sticking plastic, foam or other materials. It is non-toxic and sets fast and clear.

**ART BOX**

- **New Bostik Neon Twisters** are wax highlighters that twist up and put the fun back into highlighting. They’re non-toxic, odourless and they never dry out!
- **Tried and tested! Bostik Art & Craft Glitter Glue** is the perfect way to stick glitter to paper in one simple action.

Find Bostik Art & Craft products at leading stationery shops and retail outlets nationwide and visit www.bostik.co.za for more great craft ideas.
WIN!

A PAIR OF ROLLER KIDZ HEEL SKATES

SUBSCRIBE OR RENEW NOW, SAVE 15 PERCENT AND YOU’LL STAND A CHANCE TO WIN* ONE OF 57 PAIRS OF ROLLER KIDZ HEEL SKATES.

The new, awesome two-wheel Roller Kidz Heel Skates strap on to any pair of shoes! Unlike traditional roller skates, these strap onto your own shoes. They are strong, adjustable and also fit any adult shoe sizes with a weight limit of 90 kilograms. They’re available in five different colours and have cool flashing LEDs, which use magnetic energy in the wheels. This nifty toy helps stimulate gross and fine motor skills in children.

Don’t leave home without your heel skates these holidays. They are compact and a must for children from the age of five. You can visit www.rollerkidz.co.za or call 083-445-3165 for more details.

*Ask an adult’s permission first. SMSs do not apply. Offer is not valid in conjunction with Vitality offer. All new and renewed subscribers will automatically be entered into a draw to win one of 57 pairs of Roller Kidz Heel Skates valued at R350 each. Offer valid until 17 January 2014.

ANSWER: ___ ___ ___ ___ ___ A ___
RATCHET & CLANK: ALL 4 ONE
PS3 and Move
Ratchet and Clank are back and All 4 One takes off where the previous game, A Crack in Time, left off. You might remember Captain Qwark became president of Luminopolis and is now so taken with himself, he does not notice Doctor Nefarious is back and up to his old tricks. The evil Doctor has unleashed the light-eating monster Z'Grute, a force not even he can control. Join Ratchet, Clank, Captain Qwark and now for the first time Dr. Nefarious on an adventure in which you and up to three friends can play the character of your choice, explore alien planets, solve puzzles and save the innocent citizens of Luminopolis from the Z'Grute and a mysterious robotic force. All 4 One is an intergalactic experience you'll remember for light years to come.

THE ADVENTURES OF TINTIN
Blistering barnacles and thundering typhoons!
Get ready for an adventure that will take you halfway around the world.
Tintin, a curious journalist, buys a model of a ship called the Unicorn at a market and finds a secret scroll inside. Soon he's being chased by Ivanovitch Sakharine, a villain who thinks Tintin has the missing clue to the pirate Red Rackham's treasure. With the help of his dog Snowy and Captain Haddock, Tintin has to outrun his enemies and be the first to find the shipwreck of The Unicorn. The movie is based on three of the comic books featuring Tintin, created by the Belgian artist Herge in 1929. The books have been translated into 80 languages and have sold more than 350 million copies!
The Adventures of Tintin opens nationwide on 23 December 2011.

SPOT THE DIFFERENCE
Find the five differences between the pictures.

YUNOMI
Did you know your best friend was born in Cape Town or your dad's first car was a red Volkswagen? Yunomi is a new board game all about who knows the most about everyone else! Make your way around the board, answering weird and wacky questions about your friends and family. The goal: to be the Yunomi champion.
What super fun will Atlas, Neville, Lulu, and Major get into late at night?

SuperGuy? What makes him so super?

He has superpowers, Major... duh!

Atlas! Lulu! Want to see my superpower?

Yes! Yes! Yes! Yes!

Fwip!

Dogs would make the best superheroes! We’re super-Strong!

Agility! That’s a real power!

Laugh all you want. Captain Furball will have his revenge.

Miaow! Whoa!

How about night vision?

Dogs can see in the dark, too!

Hmm? I can’t see a thing!
WHAT'S THAT I SMELL IN MAX'S BACKPACK? A SWISS CHEESE SANDWICH.

WHAT A MESS! GET BACK HERE, YOU TROUBLEMAKERS.

DOESN'T GET MORE SUPER THAN THAT!

SUPERPOWERS TO GET US OUT OF THIS JAM, PRINCESS TALLULAH?

WHY DON'T YOU USE YOUR SUPERPOWERS TO GET US OUT OF THIS JAM, PRINCESS TALLULAH?

IT'S JUST LULU!

SCOOT! PLAY OUTSIDE WHILE I CLEAN THIS UP.

CAPTAIN FURBALL DODGES TROUBLE ONCE AGAIN! HEE-HEE.

LULU, ATLAS, AND MAJOR ARE IN SUPER-TROUBLE NOW. DON'T MISS THE ACTION THE NEXT TIME THESE PETS ARE UNLEASHED!
Animals often blend into their environments for protection. Find the animals listed below in the photographs. Write the letter of the correct photo next to each animal’s name. **Answers on page 50**

1. hare
2. snake
3. eel
4. deer
5. owl
6. shrimp
7. tiger
8. praying mantis
9. fish
10. lemur
11. bat

AVAILABLE AT SELECTED RETAILERS NATIONWIDE

SUBSCRIPTION OFFER*

A YEAR FOR ONLY R199 + FREE BOOK

(NINE ISSUES)

NG LITTLE KIDS is available in Afrikaans and English.

Offer closes 31 January 2012. NG Little Kids is published every six weeks. Offer limited to first 211 subscribers. Only one book per order. We reserve the right to substitute the gift pictured with one of equivalent value. If you take out a gift subscription, you will receive it, not the gift recipient. Offer available to SA addresses only. Please call 021 405 1905 for international rates. Allow six weeks for delivery.
